Located in Azure but
available in any private
cloud

Contracts underpin many businesses. 60% of spend is driven through supplier contracts. 90% of income is driven by customer contracts. Contracts are increasing in complexity with a drive towards pay per use & consumption-based contracts. We are seeing much increased emphasis on compliance and increased need for contract analytics in order to align contractual spend with actual spend.

Contract management is becoming an expensive task requiring much human input which distracts from the core business focus of income and controlling spend
